

Portfolio company impact on the Sustainable Development Goals - SDGs

Our work with mapping the portfolio companies' impacts, positive as well as negative, to the SDGs is used as a way to prioritize, focus our actions and communicate on progress. As mentioned earlier we have chosen to focus especially on three SDGs that we work with and report on across all portfolio companies: Climate Action, Gender Equality and Employer Responsibility.

Focus Area I: Climate Action in Polaris' portfolio

Our focus on Climate Action is based on measuring and tracking the CO2e emissions of our portfolio companies on an annual basis. By doing this we create transparency and ensure that the footprint of the portfolio companies can be addressed, and our portfolio companies actively can work towards reducing their CO2e through identification and implementation of relevant reduction initiatives. We are encouraging and supporting our companies to set reduction targets in-line with the Paris Agreement through Science Based Targets approved by the Science Based Target Initiative (SBTI)

In 2021, our companies continued to work with addressing climate change. As many broaden the scope of their measurements, it makes it difficult to follow-up the development on a portfolio level and often also to follow-up on the performance of a single company. These continuous improvements should be expected and are necessary to enable the companies to better understand and address their emissions properly. We continue to believe in the benefits of our detailed bottom-up approach to CO2e measurement as we believe that this is the best foundation for understanding your emissions and be able to identify the right reduction measures. Targets for the emission reductions should be set in-line with the Paris Agreement and we encourage and support our portfolio companies to set science-based targets approved by the Science Based Target Initiative. A few companies already started this process in 2021 and we expect several companies to get science-based targets approved during 2022. We recognize that it is a large effort for a company to seriously address climate and this might take some time to establish. We at Polaris do what we can to support our portfolio companies on this journey.

1) Company has not yet measured their carbon footprint
2) MENU and RelyOn Nutec only started to include Scope 3 categories in 2021
3) Includes Location Based Scope 2 emissions

Focus Area II: Gender Equality in Polaris' portfolio

With Gender Equality as a focus area for our work, the share of women on board, management and employee level has been chosen as a cross-portfolio KPI for Polaris. Thus, all portfolio companies are reporting annually on the gender balance across their organization and Polaris will report on this KPI for the portfolio as a whole. The metric measured is share of women across the portfolio companies, and the work is focused on ensuring a balanced workforce and increase the share of the underrepresented gender.

	Fund IV	Fund V	
Tracking	100% <i>(10 of 10)</i>	100% <i>(5 of 5)</i>	of portfolio companies are tracking on gender diversity

Initiatives	60% <i>(6 of 10)</i>	20% <i>(1 of 5)</i>	of portfolio companies have defined and initiated initiatives to strengthen Gender Equality

Gender equality

Share of women across portfolio - Year end 2021 (2020)

We expect our portfolio companies to promote gender equality and, as part of Polaris Sustainability Program, formulate initiatives to secure a balanced gender distribution. Our ambition is to reach a 40/60 gender balance across our portfolio for management teams and boards over time. As we follow up on the gender distribution among our companies' Board of Directors, management teams and employees, we can see the companies overall are close to 40% women in staff but that is not reflected in the management teams and Board of Directors. At the board level, we at Polaris continue our effort to expand our network of female professionals for potential board and management team positions through our co-operations with the Danish board network Bestyrelseskvinder ("Board Women"). In 2021, this co-operation led to the

recruitment of the chair person for Sinful, one of our new portfolio companies. We will continue to work to broaden our network of female professionals to improve our recruitment base. At the portfolio level, all companies now report on gender distribution and many have initiatives in-place to improve. We expect more to follow as we are onboarding our portfolio companies into Polaris Sustainability Program. Our focus on Gender Equality throughout Polaris drives focus and transparency on this important topic and helps drive change but we acknowledge that we still have a long way to go. In the future, we will work to transfer best practices between our portfolio companies and ensure they all have actions plans which are approved and followed up by the board of directors.

* Vikingbus was acquired in 2021 and is not included in the 2020 numbers
** All companies in Polaris Fund V were acquired in 2021

Management summary

“We recognize that Rome was not built in one day, neither is a sustainable business. Therefore, we focused on organizing our efforts identifying and scoping initiatives and projects for both a short-term and long-term strategy.”

During 2021 Link Logistics has increased its sustainability focus, building on the framework created in 2020. As a part of the transport sector, we recognize our responsibility, and our ambition is to address and act on current global challenges. We have based our responsible business conduct on managing potential and actual adverse impacts on the internationally agreed core areas of sustainable development: social, environmental, and economic sustainability.

Managing our impact through the integration process

2021 was an exciting year for Link in general. In August, we officially included YOYO Global Freight as part of Link Logistics. Both the months before and especially after the signing have been focused on making the merger a success across all locations and departments. This has been an incredibly resource-demanding process, forcing the entire business to run faster. As YOYO did not have a sustainability strategy or fundament, a lot of work has been put into including the YOYO business in Link's sustainability strategy, work, and accounting. With the merger, we have added several countries to our portfolio, and the work to understand and manage our impact across all countries will continue in 2022.

Past, present, and future focus - creating our first sustainability strategy

In 2020 the primary focus for Link was to create a solid foundation to build our sustainability efforts on. This included conducting our first impact assessment, performing a TCFD aligned Climate-Related Risks & Opportunity Assessment, and linking our efforts and commitment to supporting the UN's work to achieve the 17 Sustainable Development Goals (SDGs), with a primary focus on SDG 5, 8, 9 and 13.

In 2021 we initiated the groundwork of how to manage our impact. In August, the board agreed on incorporating sustainability as part of our strategic ambition, thus committing to having a greater focus on sustainability and the SDGs moving forward. Being pioneers is one of our core values, and we aim to be one of the sustainable pioneers in our sector.

We recognize that Rome was not built in one day, neither is a sustainable business. Therefore, we focused on organizing our efforts identifying and scoping initiatives and projects for both a short-term and long-term strategy. These efforts include initiating projects to create transparency and reduce emissions throughout our operations and transport: In 2021, we decided to set targets to reduce our

CO2e emissions by committing to setting Science-Based Targets and aligning ourselves with the Science-Based Target initiative. We are currently in the process of having our specific targets for Scope 1 and 2 approved by the SBTi and we are committed to reducing our Scope 3 emissions. We aim to detail the target for our Scope 3 reductions in more detail during 2022.

To ensure that our present and future efforts align with Link's overall strategic ambition and focus on managing the identified risks, a sustainability strategy for 2022 was created and approved by the board. Through this strategy, we have identified and scoped the projects for 2022 and divided them into 5 key areas - Governance, Climate Actions, Impact Assessments, Customer Value Adds, and Internal Support projects. Our sustainability strategy aims to ensure that we initiate the right initiatives and transform the organization from the inside out. Supported by innovative and frontrunner projects, we need to create a company culture and identity base that nurtures a sustainable way of working.

We are on an exciting journey and are looking forward to continuing this in the years to come towards a stage where sustainability is an embedded part of the business.

With kind regards,

Anders Martens

Sustainability metrics

Polaris cross-portfolio KPIs

13

PREVENT THE PLANET

Climate action

As YOYO Global Freight has been integrated as part of Link Logistics, all CO2e emissions have been included in the report, and therefore we see a significant increase in the overall emissions due to the nature of the freight forwarding business in YOYO. The CO2e intensity for Link alone in 2021 decreased from 88.6 to 83.6 tons/employee. The work ahead within this area will be focused on increasing supplier data for the combined organisation and providing customers with more emissions transparency.

GRI: 305-1a, 305-2a, 305-3a, 305-4a

Climate Action Management

- Scope 1 & 2**
Spend-based calculations with national statistics on fuel and energy prices.
- Scope 3**
Combination of spend-based calculations, and activity-based for key categories.
- Strategy & targets**
In 2022 science-based targets will be set to align with the Paris agreement. Specific numbers can not be provided yet.
- Initiatives**
Initiatives defined and approved by BoD. Most are already initiated.
- TCFD**
TCFD aligned analysis was conducted in 2020, and in 2021 initiatives related to risks and opportunities were launched.

5

ENSURE EQUALITY

Gender equality

There was an increase in the share of women in management and among employees between 2020 and 2021.

The efforts to increase the share of women at other employment levels have been successful and will continue in 2022.

GRI: 405-1(i)

Gender Equality Management

- Tracking**
Tracking in place on gender across the organization, at different tenures.
- Strategy & targets**
Targets have been defined and approved by the BoD.
- Initiatives**
Initiatives defined and approved by the BoD. Focus on the recruiting and promotion processes.

8

SECURE WORK AND ECONOMIC GROWTH

Employee turnover

We have seen a significant increase in the turnover for full-time employees. A part of the increase can be assigned the merger with YOYO as we have an overall higher number of employees. The merger has also meant that not all employees want to continue on the journey ahead. We have a high focus on maintaining our valuable employees, and therefore our focus in 2022 is to increase the flow of communication through the organization to understand and fulfill the needs of all employees across countries and locations.

SASB: Adapted from HC-DY-330a.1

Employee Turnover Management

- Tracking**
Tracking in place on employee-initiated turnover.
- Strategy & targets**
Targets to be defined and approved by the BoD in 2022.
- Initiatives**
Initiatives defined to ensure good work environment and employee engagement.

Portfolio company-specific KPIs and initiatives

13

PREVENT THE PLANET

Environmental impact of own pickup cars

The increase in own emissions is a direct result of the merger with YOYO as we have added several pickup cars to our fleet. A focus in 2022 is to get back on track with reducing our emissions across the organization, and including the YOYO locations in our efficiency improvements and route planning scheme.

SASB: Adapted from TR-AF-430a.2

Reducing our environmental footprint

In 2021 we used the baseline created in 2020 as a foundation to identify further opportunities to reduce our CO2e emissions continuously. We initiated a range of projects to reduce our footprint. A big project that is still ongoing is within waste management and sustainable packaging for our warehouse division. In 2022 we will continue initiating several internal projects to reduce our footprint.

13

PREVENT THE PLANET

Air quality

2020 Link Logistics has initiated dialogue with key suppliers to gather NOx (excl. N2O data) on services provided by them. This is continued in 2021, as the current data provided is faulty and thus cannot be seen as accurate. We continue to work on the data with suppliers, as we believe this KPI is important for our business.

SASB: TR-AF-120a.1

Reducing emissions from own pickup cars

An important project for Link Logistics is looking into solutions to bring down the CO2e and Nox emissions from our own pickup cars, the company leased cars, and suppliers. In 2021 the key focus for the organization was the merger, and therefore the green fleet project was put on hold for a while.

At the end of 2021 and with continued high focus in 2022 we are working with several solutions for the short and long term to lower both the emissions from the current fleet and ensure that our fleet increasingly will include new, green cars as current vehicles are being replaced.

In 2021 we initiated a green initiative for leased company cars, and 25% of the cars are either hybrid or full electric driven cars. Continued focus for 2022 is the conversion of our fleet of pick-up cars.

3

GOOD HEALTH AND WELL-BEING

Accidents & safety management

Unfortunately, we had an increase in work-related accidents in 2021. Our goal is to have no accidents each year, and we are working on employee safety training and instructions to decrease the number of accidents.

SASB: Adapted from TR-AF-320a.1

Create an accident-free workplace

All new employees in the warehouse and operations receive instructions in safe and proper lifting and carrying techniques for different kinds of parcels aligned with the Work Environment in Denmark (WEA) guidelines. We have worked to increase awareness on safe working conditions through management and the employee handbook. In 2021 we did a safety analysis at our terminals and warehouses, and following enforced a set of more thorough requirements in the identified risk locations.

These requirements include mandatory yellow vests and safety shoes in risk areas. Additionally, Link has clear processes for accident and incident reporting and investigations to ensure focus on root cause identification and effective corrective and preventative actions.

The Sustainable Development Goals

Polaris Management’s contribution to the SDGs

INCREASING POSITIVE IMPACTS

Concrete initiatives in progress

Employee & organization

- Work to support gender equality in the private equity industry in Denmark, Sweden, and Europe
- Ensure a working environment supporting gender equality at Polaris Management

Active ownership

- Ensure initiatives to improve gender equality in Polaris’ portfolio companies
- Expand Polaris’ female network and recruitment base for projects, board, and management team positions

Employees & Organization

- Initiative to support employee health
- Process to foster culture of feedback and personal development

Active ownership

- Ensure initiatives to improve working environment in Polaris’ portfolio companies

Investment thesis & process

- Integrate sustainability in Polaris’ investment process

Active ownership

- Ensure sustainability program that addresses relevant risks and opportunities are available in Polaris’ Portfolio companies

Status on initiatives

Employees & organization

- During 2021, we took an active role in Level 20 in Denmark where we arranged presentations and training programs to attract female students to private equity. As members of the International Committee, we also contribute to this agenda on a European level.
- The new parental leave policy was introduced and two male members of the investment team utilized this opportunity during 2021. We also included Diversity & Inclusion questions in our new Employee Satisfaction survey

Active ownership

- For the 2nd year we follow-up on gender distribution and plans for gender equality in our portfolio companies and this topic was made part of the agenda in two of our new portfolio companies during 2021.
- Our collaboration continued with the female board network “Bestyrelseskvinder” and our efforts in 2020 resulted in the recruitment of a female chairperson to one of our new portfolio companies.

Employees & organization

- We conducted a detailed survey of our physical working conditions and are following up the results (APV/ Arbejdspilsvurdering)
- Extended annual review and 360-degree feedback process implemented with support by new HR system Emplify. During 2021, we extended our feedback systems to include project assessments during the year and a new Employee Satisfaction survey will be conducted annually with supplementary “Pulse checks” during the year

Active ownership

- With working environment as one of our sustainability focus areas, we included this topic of the board agenda of two of our newly acquired companies

Investment thesis & process

- Our expanded Sustainability Due Diligence standard was an integrated part of the evaluation processes preceding the four investments evaluated and signed in 2021

Active ownership

- Polaris Sustainability Program, which is part of our Excellence Model, was rolled out in two of our new portfolio companies during the year and plans were made to add four additional companies during 2022.

MINIMIZING NEGATIVE IMPACTS

Concrete initiatives in progress

Employees & Organization

- Implement initiatives to reduce climate impact in Polaris Management based on calculations of CO2e emissions

Active ownership

- Ensure initiatives to reduce climate impact in Polaris’ portfolio companies based on calculations of CO2e emissions

Investment thesis & process

- See “Increasing Positive Impacts”

Status on initiatives

Employees & Organization

- Emissions from travel were kept at a low level compared to 2019 (13 tCO2e vs. 89 tCO2e) despite the lifting of Covid-related restrictions as we are now structurally leveraging a significantly higher proportion of digital meetings. We expect this to continue. During 2022, we will reach out to our advisors as they constitute around 75% of our emissions.

Active Ownership

- We continue to implement the measurement of CO2e emissions in our portfolio companies on Scope 1,2 and 3. In 2021, two new companies completed their measurement and two of our legacy companies completed their first part of their Scope 3 assessment. In addition, three portfolio companies were actively preparing to submit their application for validation of their science-based targets by the SBTi

- See “Increasing Positive Impacts”
