

ETHICS

Adherence to the highest legal and ethical standards and our reputation for acting responsibly play a critical role in our success as a business. With the guidance and approval of the Board, we have established corporate policies that institutionalize our core values and form the basis of conduct at Blackline Safety.

CODE OF BUSINESS CONDUCT AND ETHICS

Blackline Safety's [Code of Business Conduct and Ethics](#) reflects our commitment to a culture of honesty, integrity, and accountability. It outlines the basic principles and policies with which all service providers are expected to comply. Service providers are our directors, officers, employees, consultants, contractors, contract operators and any other person or company that provides services to Blackline Safety. Annually, we require reaffirmation from our employees that they have read and will comply with the Code, which helps us meet our business practice standards and comply with applicable laws and regulations.

WHISTLEBLOWER POLICY

Our independent [Whistleblower](#) reporting tool is available to report anonymous concerns regarding violations of Blackline's employee handbook and corporate policies, including suspected instances of illegal or questionable accounting, internal control, auditing, or people matters. When issues are reported, we will investigate, address, and respond, where necessary. We do not take adverse actions on persons who report misconduct. We are committed to investigating and addressing all complaints reported.

ANTI-CORRUPTION POLICY

Blackline Safety's [Anti-Corruption](#) policy provides guidelines to encourage ethical behavior in our business conduct and promote compliance with applicable anti-corruption legislation. It applies to employees, officers, and directors of the Company, and reflects the standards to which Blackline Safety expects its partners, agents, consultants, contractors, contractual counterparties and any other third party who can act on behalf of Blackline Safety to adhere when acting on Blackline Safety's behalf.

GHG EMISSIONS & CLIMATE CHANGE

As part of our approach to managing emissions, we are focused on reducing our Scope 1, Scope 2 and Scope 3 greenhouse gas emissions intensity and have established a **corporate wide goal of achieving net-zero emissions for fiscal year 2023.**

As the world transitions to a lower carbon economy, climate-related policies and regulations around carbon emissions are evolving rapidly and are becoming increasingly stringent, requiring our business to adapt as we strive to be a leader in industrial safety as well as environmental stewardship. We are closely monitoring this evolving landscape to identify impacts to our business and potential opportunities resulting from policy change.

We are working to improve the accuracy of our emissions data as methodologies change and technology used to retrieve and analyze environmental data evolves. Improving our data collection processes allows us to improve our reporting, further understand our impacts and identify potential additional emission reduction opportunities. In fiscal 2022, we have engaged a consultant with expertise in the GHG monitoring field to assess our baseline GHG emissions, provide recommendations on ways to reduce our energy inputs and turn to renewable sources as much as possible.

DATA

	FY2021	FY2020
Scope 1 - MT CO ₂ e	215.0	165.6
Scope 2 - MT CO ₂ e*	576.0	227.4
Scope 3 - MT CO ₂ e**	1,606.2	1,661.2
Total (MT CO ₂ e)	2,397.2	2,054.2

*Scope 2 emissions calculated using the location-based method. Use of the market-based method to reflect renewable energy purchases is a priority in future reports.

**Includes categories 3 (Fuel- and Energy-Related Activities, not included in Scope 1 or Scope 2), 6 (Business travel), and 7 (Employee commuting) Scope 3 emissions only using the spend-based method using the Quantis GHG Protocol Scope 3 Evaluator. The identification of additional material upstream/downstream categories and calculation of full Scope 3 emissions data is a priority in future reports.

Our Scope 1 and 2 emissions have increased year-over-year as our workforce grew and returned to the Company's office locations in Canada and the United Kingdom throughout the year in accordance with our *Return to Office Work Plan*. Blackline Safety will continue to closely track emissions from these sources and look for ways to reduce its overall impact in order to achieve its net-zero emissions target by 2023.

ENERGY

Our primary energy inputs and water sources are largely related, directly and indirectly, to our cloud-hosted safety monitoring infrastructure that runs on Amazon Web Services (AWS) as well as the day-to-day operations of our corporate offices and manufacturing facility.
