2019 GREENHOUSE GAS INVENTORY

Scope 1 Emissions on an Intensity Basis									
Emissions	2015	2016	2017	2018	2019	2015-2016 % change	2016-2017 % change	2017-2018 % change	2018-2019 % change
tCO ₂ e/ Revenue Passenger Miles (000,000)	165.5	164.2	165.3	164.8	162.8	-0.8	0.7	-0.3	-1.2
tCO ₂ e/ Available Seat Miles (000,000)	140.2	139.7	139.4	140	137	-0.3	-0.2	0.3	-2.2

Scope 1, 2, and 3 Emissions on an Intensity Basis									
Emissions	2015	2016	2017	2018	2019	2015-2016 % change	2016-2017 % change	2017-2018 % change	2018-2019 % change
tCO ₂ e/ Revenue Passenger Miles (000,000)	199.8	198.2	199.5	198.8	196.4	-0.8	0.6	-0.3	-1.2
tCO ₂ e/ Available Seat Miles (000,000)	169.2	168.6	168.2	168.6	164.9	-0.3	-0.2	0.2	-2.2

Over the past 5 years, JetBlue has achieved consistent reductions in Scope 1-3 emissions on an intensity basis. Most recently, JetBlue improved 2.2% due to the introduction of more fuel-efficient aircraft and fuel savings procedures.

Absolute Scope 1, 2 & 3 Emissions										
Type of Emissions (tCO ₂ e)	Activity	2015	2016	2017	2018	2019	2015-2016 % change	2016-2017 % change	2017-2018 % change	2018-2019 % change
Direct (Scope 1)	Ground Fuel	11,440	10,761	11,888	13,121	15,431	-5.9%	10.5%	10.4%	17.6%

Independent Third Party Assurance Statement

To the Board and stakeholders of JetBlue Airways Corporation:

iCompli Sustainability, a division of BPA Worldwide, was commissioned by JetBlue Airways Corporation (JetBlue) to provide independent assurance of specific sustainability performance data from its business activities during the period January 1, 2019, to December 31, 2019.

Scope

The organizational boundary of the verification was JetBlue’s global aircraft fleet and ground facilities, as defined using the financial control approach. Emissions sources include jet, diesel and gasoline fuel, and electricity consumption, to verify the following specific sustainability performance data:

- Scope 1 GHG emissions
- Scope 2 GHG emissions

Standards & Objectives

Our assurance was managed in accordance with ISO 14064-3: Greenhouse gases – Specification with guidance for the validation and verification of greenhouse gas assertions. The objective was to provide JetBlue stakeholders with an independent ‘limited’ level assurance opinion on whether:

- The specific sustainability performance data within JetBlue reports adheres to the ISO 14064-3 principles of relevance, completeness, consistency, accuracy, and transparency.
- The specific sustainability performance data within JetBlue reports are reported according to the requirements of The Climate Registry General Reporting Protocol (January 2016).

Approach and Limitations

iCompli Sustainability conducted the verification in accordance with the requirements of ISO 14064-3: Greenhouse gases – Specification with guidance for the validation and verification of greenhouse gas assertions. iCompli Sustainability reviewed JetBlue’s corporate “240420 JetBlue Footprint Calculation 2019 REISSUED (GROUND FUEL UPDATE)” (dated April 24, 2020) and evaluated the data for conformity with the requirements of The Climate Registry General Reporting Protocol. JetBlue’s reported Scope 1 and Scope 2 GHG emissions were considered free of material misstatement if found to be within the defined materiality threshold of 5%. JetBlue’s assertion was tested according to a risk-based approach and the review of controls to manage these risks, including:

- Management system and procedural review for data accuracy, reliability and reproducibility;
- Verification of representative sources and processes, including audit of a sample of original source activity records of jet fuel and energy consumption representative of JetBlue’s operations;
- Quantification testing and re-calculation assessments; and,
- Interviews with corporate personnel and designated representatives.

Certain Scope 1 and Scope 2 GHG emissions sources (energy for heating and cooling of ground facilities, fugitive emissions from ground facility refrigerant use) are excluded from the verification, due to the minor contribution of the sources to JetBlue’s total GHG emissions and concerns regarding the accuracy of the activity data.

Conclusions

JetBlue reported the following specific sustainability performance data totals for the 2019 calendar year:

SUSTAINABILITY DATA INDICATOR	REPORTED TOTAL
Scope 1 GHG emissions	8,730,756 tonnes CO2e
Scope 2 GHG emissions	25,944 tonnes CO2e

Based on the process and procedures conducted, there is no evidence that JetBlue’s GHG emissions assertion:

- is not materially correct; and
- is not a fair representation of GHG data and information; and
- has not been prepared in accordance with The Climate Registry General Reporting Protocol.

Recommendations

As part of the assurance engagement, iCompli Sustainability has provided JetBlue with a series of recommendations to ensure the continual improvement of the collection, storage, analysis, and reporting of specific sustainability performance data at the corporate and facility level.

iCompli Sustainability, a division of BPA Worldwide
